Table F. Two-Sample T-Test Comparing Pre- and Post-Outbreak
Weighted Mean EPA Values

EPA Dimension	Weighted Means		
	Pre	Post	P-Value
Evaluation	1.66	0.67	0.000 ***
Potency	2.43	2.30	0.455
Activity	1.89	1.94	0.799
N =	110	192	

* $p < 0.05$; ** $p < 0.01$; *** $p < 0.001$ (two-tailed tests)

Notes: Observations used in each t-test are weighted to match the marginal distributions of the 2010 U.S. Census on categories of gender, race/ethnicity, level of education, and age. The "police officer" stimulus declined in mean evaluation more than any of the 85 occupational identities in our sample, and was excluded as an outlier. Note that the post-outbreak data collection coincided with a national wave of protests against police brutality that began in late May of 2020 and persisted for the duration of the post-outbreak data collection.
